

McAfee® SaaS Security Suites

Keep blended security threats outside your network and keep your email archived and available.

If you don't have a complete network security solution, you're leaving your business network wide open to the enemy. Prevent attacks from destructive spam, viruses, worms, malware-laden websites, and lost or deleted email messages with three competitively-priced Security Suites from McAfee SaaS Email & Web Security.

Spam now accounts for more than 92% of all email traffic.

*McAfee Threat Report:
Third Quarter, 2009*

Three options make it easy to design business-specific online protection

Now you can keep your email network protected, your employees safe, and your business in compliance. Choose the combination of McAfee SaaS Email Protection, SaaS Web Protection and SaaS Email Archiving that best addresses the unique needs of your organization.

- **McAfee SaaS Complete Security**
 - » Combines SaaS Email Security, SaaS Web Protection and SaaS Email Archiving
- **McAfee SaaS Email Security & Archiving**
 - » Combines SaaS Email Security and SaaS Email Archiving
- **McAfee Email & Web Security**
 - » Combines SaaS Email Security and SaaS Web Protection

Cloud-based service offers protection and peace of mind

Comprehensive email protection doesn't have to mean time-consuming implementation and administration. Here's why you should implement our economical, award-winning SaaS email security service:

- We block billions of spam, viruses, worms, and phishing threats outside the network every month
- Activation starts with a simple MX record redirection and then you fine-tune the system to your specifications through our intuitive web-based Control Console
- SaaS is easy-to-justify as an operational expense and ours eliminates the need to hire additional IT staff
- Disaster recovery options provide business continuity during emergencies

Create a more safe and secure network

More practical than completely blocking employee Internet access, the SaaS Web Protection Service works at the network perimeter to help you foster a more productive and secure online experience. Our Web filtering protection:

- Works at the network perimeter to protect the company, employees and network assets from spyware, viruses and phishing attacks
- Allows greater management control over unauthorized, unproductive workplace Internet usage with group policies and content control
- Provides continuous updates for real time protection
- Allows control over bandwidth-intensive applications

Get more archiving for less – less time, less money, less management

Store, search and retrieve. Although these are the fundamentals of our SaaS Email Archiving service, ours is a legal-grade, easy-to-use, fully-integrated, and economical service that:

- Automatically and safely stores email for future review and e-Discovery
- Offers powerful, precise and rapid search functionality
- Replaces cumbersome, costly and unreliable tape backup
- Requires no hardware or software purchases

McAfee SaaS Email Protection	Protects your organization from spam, viruses and worms, email attacks and fraud, while enabling ongoing communications during server outages.
McAfee SaaS Email Archiving	Provides the industry's safest and most reliable email archiving and retrieval capabilities, and integrates seamlessly with our comprehensive and easy-to-use Web-based administrative console.
McAfee SaaS Web Protection	Works outside the network perimeter to ward off spyware and viruses, while enabling you greater control over non-business-related Internet use.

There is no easier or more effective way to keep blended security threats outside your network and keep your email archived and available than with proactive protection found exclusively in the McAfee Security Suites.
